

Commers Low Salt SX Series

The Commers Low Salt SX Series offers years of trouble free performance on even the hardest of water. The system's patented microprocessor keeps a running average of the previous 21 days' water usage and automatically adjusts the conditioned water reserve higher or lower as required, ensuring you quality water when you need it. And with soft water brining keeping internal parts vital to the proper operation of the system free from the wear and tear of hard water, you'll enjoy the benefits of soft water for many years to come!

- On Demand regeneration saves on salt and water usage
- Soft water brining adds years of trouble free service
- High Performance 1 inch control valve & distributor ensure maximum water flow
- Super capacitor protects system settings from power failures for 48 hours
- Lifetime warranty on both tanks, five year warranty on the valve & all parts
- Can be customized and sized to fit your family's needs

Customized to Cure Your Water Problems

- Saves salt & water use compared to conventional mechanical time-clock systems
- Clothes and towels get brighter and whiter while using less detergent
- Skin & hair is smoother and softer after baths, showers, shaves and hand washing
- Saves 50% to 75% in soaps and detergents
- Water heater efficiency is increased 22% to 29% by less scaling

1947-2022

What size salt tank is right for me?

The salt tank is to a softener, similar to that the gas tank is to a car, without salt, your softener will not function. The salt is melted into a brine solution and in this state it is flushed through the media bed to regenerate the water softener resin.

Commers offers four sizes of brine tanks to accommodate various needs and space availability. Let a Commers water treatment specialist help in determining the right brine tank to best suit your needs.

Brine Tanks Sizes:

- 11" x 11" x 33" - Ideal for any "tight squeeze" situation. (120 lbs. capacity)
- 14" x 14" x 33" - A space saver with greater salt storage. (200 lbs. capacity)
- 18" dia x 33" - The standard if space permits. (250 lbs. capacity)
- 18" dia x 40" - Used for our large capacity units. (300 lbs. capacity)

Your Minnesota Water Treatment Experts

Commers Water Company offers a full range of water treatment including water purification and filtration. Commers has been working with purification and drinking water concerns for over forty years, long before drinking water was a national concern. Commers invented its first drinking water system in 1978 and was the first to bring these types of systems to Minnesota. In a continuing effort to pioneer the drinking water field, Commers began to work with a new technology called reverse osmosis in 1980. Working closely with the inventor of residential reverse osmosis drinking systems for over twenty years, Commers Water has more experience with drinking water systems and water purification than any other dealer in the State of Minnesota.
